Clover Hill Primary School

Mental & Written
Calculation Policy

This document recommends an approach for developing progression in the conceptual and procedural aspects of calculation across Key Stages 1 & 2. It takes into account the mathematics programme of study and non statuary guidance for the National Curriculum 2014.

The document covers:

- Calculations that an be done wholly or partially by mental methods, based on fluency with number facts and understanding of place value and number operations and sometimes using horizontally presented number sentences or empty number lines to show steps in thinking.
- * The use of expanded or informal written methods to support understanding of compact, formal written methods and
- Developing fluency in the use of formal written methods by the end of Key Stage 2.

Children should work towards being able to use, by the end of Key Stage 2:

- * A range of strategies for mental calculations appropriate to the numbers involved.
- * One formal written method (for each number operation) for calculations that cannot be done mentally.

<u>Progression in mental calculation skills can be supported by:</u>

- * The ability to quickly recall a range of number facts and an understanding of how to use them to derive other related facts.
- Understanding how numbers and calculations can be represented by materials and images such as arrays, ten frames Numicon shapes.

An understanding of the number system (order and relative position of numbers, place value, etc.) the four number operations and the laws of arithmetic associated with them.

Understanding of how symbols are use to record calculations especially the equals sign. Care should be taken that the equals sign is used correctly

⇒ Eg. 42+35= might be calculated by partitioning the second number to add the tens followed by the units. This could be recorded as:

$$72+5 = 77$$

But not as 42+ 30= 72+5 = 77 as this involves incorrect use of the first equal sign.

- ⇒ An understanding of how calculations can be represented on empty number lines. They will need to work with numbered tracks and lines first before they are confident to rely on empty lines alone.
- ⇒ To make good use of empty lines children need to be able to:
- Move forward and back confidently on the number line.
- Make jumps of different sizes.
- Recognise landmark numbers such as multiples of 10.
- Know and use number complements to 10 and how these relate to multiples of 10.

 \Rightarrow Partition and recombine numbers in appropriate ways eq 7+5 as 7 + 3 +2 or 28+9 as 28+10-1

Teachers should demonstrate the use of number sentences and number lines to model steps in calculations. Children should be encourage to record the steps in their mental calculations some of the time. Recording is useful when explaining methods to others and to show which strategy has been used. It is not necessary to always record, especially for those children who have efficient mental methods. Teachers should use their judgement about when recording is necessary.

Progression to fluency with a formal written method for each number operation can be made by:

- ⇒ The appropriate use of informal or expanded written methods that build on mental methods continue to highlight understanding of the number system and number operations.
- ⇒ Linking of these expanded methods to the formal written method when it is first introduced to highlight steps that may be concealed, and therefore not understood, in the procedural execution of the formal written method.
- ⇒ Appropriate levels of practice of formal written methods to develop fluency.

Children should continue to develop their mental calculation skills with larger numbers once written methods are introduced and should be given opportunities to identify which calculations might be done mentally, with reference to the **nature** rather than the **magnitude** of the numbers involved. They should use mental calculation skills to estimate the likely magnitude of the answer when performing a calculation using a formal method and hence identify answers that are unreasonable and indicate errors to execution of the method.

Teachers need to judge when children are ready to move from mental to written calculations. The following lists offer some guidance:

Addition and Subtraction

Can pupils:

- recall addition and subtraction facts to 20?
- understand place value and partition numbers?
- add three single digit numbers mentally?
- add or subtract any pair of two digit numbers mentally?
- explain their mental strategies orally and record them using horizontal number sentences or an empty number line?

Multiplication and Division

Can pupils:

- quickly recall multiplication and division facts for 2, 3, 4, 5 and 10 times tables?
- understand what happens when a number is multiplied by 0 or 1?
- understand 0 as a place holder?
- multiply two- and three-digit numbers mentally by 10 and 100?
- demonstrate understanding of the commutative, distributive and associative laws (though not necessarily know the names)?
- double and halve two-digit numbers mentally?
- explain mental strategies orally and with recording?

This document considers addition and subtraction together followed by multiplication and division. Links between number operations should be emphasised regularly. A year by year approach has been taken in line with the format of the National Curriculum 2014 programmes of study but teachers should have regard to other year group expectations when planning for different abilities.

Clover Hill Primary School Reception

Mental & Written
Calculation Policy

The number strand of Mathematics involves providing pupils with opportunities to practise and improve their skills in counting numbers and also calculating simple addition and subtraction problems.

In Reception, we help children to:

- Recognise the numerals from 1-20.
- Count up to at least 20 accurately.
- Count small numbers of objects accurately
- Count actions such as claps or jumps accurately
- Appreciate the relationship between numerals and sets of objects.
- Estimate how many objects they can see and then check by counting.
- Use the language of "more" and "less" to compare sets of objects.
- Find the total number of items in two sets by counting all of them.
- Find one more or one less from a group of up to 10 objects.
- Say the number that is one more or one less than a given number.
- Use vocabulary related to addition and subtraction.
- Write numerals from 1-20.
- Identify their own mathematical problems based on their interests.

Children learn through play, both inside and outside. The role of the adults is to ensure the children learn as they play. This is through planning and providing equipment and play opportunities that encourage mathematical thinking.

When building a tower of bricks there are opportunities for counting then comparing sizes; adding 2 more bricks to make it taller; knocking 5 off the top to make it smaller comparing the height of the tower to the child or to a friend... is it as tall as me, is it shorter than Jack?

Children playing shops will make price labels and then use coins to pay for their shopping, matching the number of coins to the price label.

Children playing with the farm animals might place 4 sheep and 5 cows in a field and then say how many animals they have altogether.

Children take part in short daily mental maths sessions, lively sessions that can use games, rhymes and practical resources to stimulate mathematical development. Children also participate in adult led smaller group sessions throughout the week.

It is our aim that by the end of Reception children achieve their Early Learning Goal.

ELG11 - Numbers

Children count reliably with numbers from 1 to 20, place them in order and say which number is one more or one less than a given number. Using quantities and objects, they add and subtract two single-digit numbers and count on or back to find the answer. They solve problems, including doubling, halving and sharing.

If children exceed the Early Learning Goal, it is expected that they will be able to...

ELG11 – Numbers – Exceeding

Estimate a number of objects and check quantities by counting up to 20. They will also be able to solve practical problems that involve combining groups of 2, 5 or 10, or sharing into equal groups.

Assessment is based primarily on our knowledge of your children. This knowledge is gained predominantly from observation and interaction in a range of daily activities and events. Examples of what these observations may look like are below...

Jonathan counted out 10 raisins; he counted down as he ate them...10, 9, 8, 7, 6, 5, 4, 3, 2, 1.

Kate proudly showed a spider she had made. "Oh no! It's got 7 legs now. One must have fallen off. I'm going to glue another leg so that it's got 8 again."

Hatty and Emily were preparing a teddy bears picnic in the outdoor area. They agreed that they would ask the other children if they would like to come to their picnic. They counted 5 seats and Emily said that they had room for 3 more people.

Christopher sorted the carrots and apples for snack time. "We have 17 apples and 14 carrots. There are more apples."

When playing in the shop Sophie was able to use her shopping list to add 2 amounts. "The beans are 5 pence and the bananas are 3 pence, altogether that is 8 pence."

Hannah made a chart of the children outside. She listed how many girls and how many boys were outside. "There are 5 girls and 4 boys, that's 9 altogether."

What can you do to support your child's learning?

- Count everything! Add more or take some away and recount!
- Sing number rhymes; 5 little ducks, 1, 2, 3, 4, 5 Once I caught a fish alive.
- Point out numbers on doors, buses, car number plates etc.
- Share things out and see if it is fair.
- Sort out different coloured sweets; are there more or less yellow ones?
- Cook weigh/measure ingredients, set the timer etc.
- Play shops; count and play with real money 1p and 2p coins to begin with.
- Notice important times; 7 o'clock bedtime!
- Look for and talk about the maths in stories.
- Set the table; how many people for tea? Count out how many plates etc. are needed.
- Typing numbers into a phone to call Grandma.
- Typing channel numbers into a remote control.
- Pouring and filling in the bath; how many cups will fill the jug?

Clover Hill Primary School Year 1

Mental & Written
Calculation Policy

Addition and Subtraction

Children in Year 1 should:

- Use concrete objects and pictorial representations, including number lines, to support their solution of addition and subtraction problems.
- Represent and use number bonds and related subtraction facts within 20, memorizing and reasoning with these bonds.
- Add and subtract one-digit and two-digit numbers to 20, including zero (and realise the effect of adding or subtracting zero to establish the relationship between these operations).
- Read, write and interpret mathematical statements involving addition (+), subtraction (-) and (=) signs in a range of formats e.g. \triangle + 5 = 12 or 7 = \Diamond 9.

Multiplication and Division

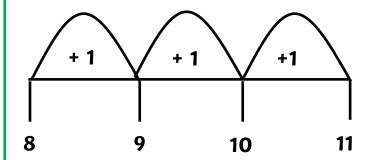

Children in Year 1 should:

- Solve one step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.
- Through grouping and sharing small quantities, pupils begin to understand: multiplication and division; doubling numbers and quantities; and finding simple fractions of numbers and quantities
- Pupils make connections between arrays, number patterns and counting in twos, fives and tens.

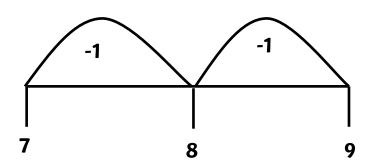

Counting on/back

8+3= 11

9-2=7

Reordering: Count on from larger number

3 + 8 = rewrite as 8 + 3 =

Find pairs that total 10

3+4+7 is the same as 3+7+4 is the same as 10+ 4

NB: Children are not expected to draw number lines. They are used for demonstration only.

Partition into 5 and a bit

5 + 8 becomes 5+5+3 becomes 10 + 3 = 13

7 + 8 becomes 5+2+5+3 is the same as 5+5+2+3 becomes 10+5

Use near doubles

5+6 becomes 5+5+1 becomes 10+1= 11

Begin to bridge through 10

6+7 = 2

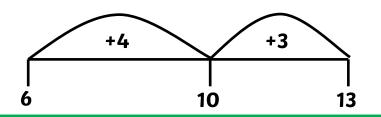

13-7= ?

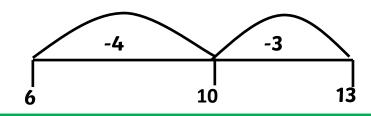

6+4 = 10

13-3= 10

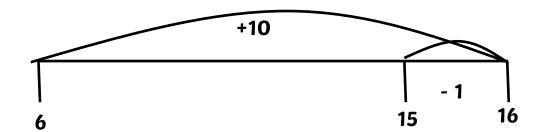

10+3 = 13

10-4= 6

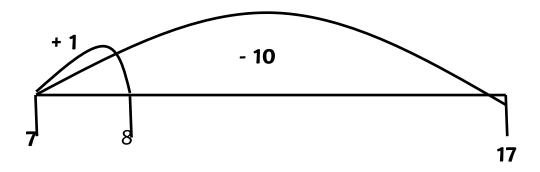

Add or Subtract 9

6+9=

6+ 10 = 16

16 -1 = 15

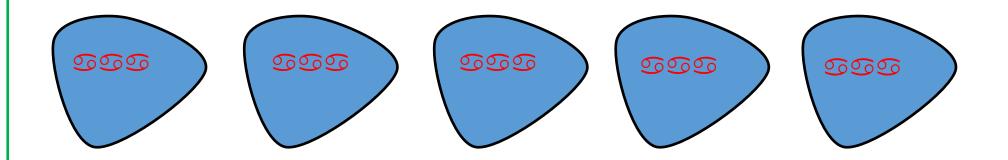

17-9= 17-10=7 7+1 = 8

Year 1 Multiplication and Division

Multiplication

There are 3 sweets in one bag. How many sweets are there in 5 bags?

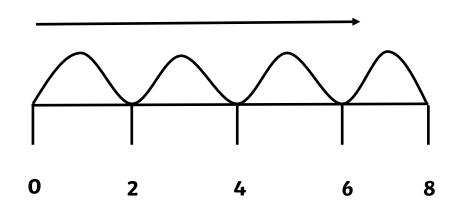

<u>Arrays</u>

2 groups of 4 or 4 groups of 2

<u>ಎಂಎಂ</u>

9999

Jump forward in 2s on a number line

Year 1 Multiplication and Division

Division

12 children get into teams of 4 to play a game. How many teams are there?

<u>Arrays</u>

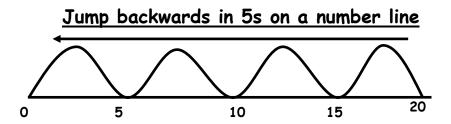

Put into groups of two

<u>ಎಂಂ</u>

<u>ಾಂ</u>

<u>ಎಂಂ</u>

<u>ಎಂಎಂ</u>

Clover Hill Primary School Year 2

Mental & Written
Calculation Policy

Addition and Subtraction

Children in Year 2 should:

- Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100 e.g. use 3 + 7 = 10 to know that 30 + 70 = 100
- Use concrete objects and pictorial representations to support their solution of addition and subtraction problems and to add and subtract mentally including Tens & Units+/-Units, Tens & Units +/- Tens, Tens & Units +/- Tens & Units + Units + Units.
- Show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot. Use the associative law of addition to show for example that 5 + 2 + 1 = 1 + 5 + 2 = 1 + 2 + 5.
- Recognise and use the inverse relationship between addition and subtraction and use this to check calculations
 and solve missing number problems.
- Record mental additions and subtractions using horizontal number sentences and/or empty number lines to show and explain the steps in their calculations.
- Recording in columns supports place value and prepares for formal methods.

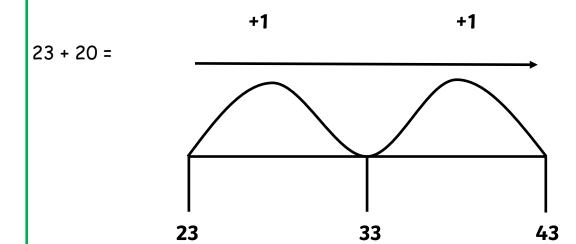

Multiplication and Division

- Children in Year 2 should:
- Use materials and contexts in which multiplication and division relate to grouping and sharing discrete and continuous quantities, to arrays and to repeated addition. Begin to relate ideas to fractions and measures.
- Recall and use the multiplication and division facts for the 2, 5, 10 & 3 multiplication tables, including recognising odd and even numbers.

- Make connections between these tables and connect the 10 multiplication table to place value and the five table to divisions on a clock face
- Use number sentences to show multiplication as repeated addition.
- Record multiplications and divisions as jumps on number lines.
- Calculate mathematical statements for multiplication and division within the multiplication tables and use x, \div and = signs.
- Show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot.
- Use commutativity and inverse relationships to develop multiplicative reasoning e.g. $4 \times 5 = 20$ and $20 \div 5 = 4$
- Solve problems, including problems in contexts, involving multiplication and division, using materials, arrays, repeated addition, mental methods and multiplication and division facts.

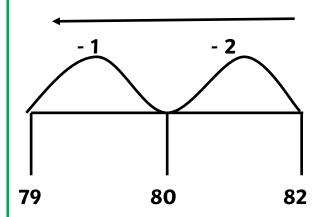

Counting on/back in ones and tens

NB: Children are not expected to draw numbers lines. They are used for demonstration only.

Count up to find a small difference

Reordering

5 + 7 + 5 = becomes 5 + 5 + 7

<u>Using near doubles</u>

$$6 + 7 = becomes 6 + 6 + 1 =$$

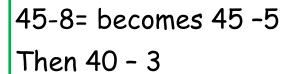

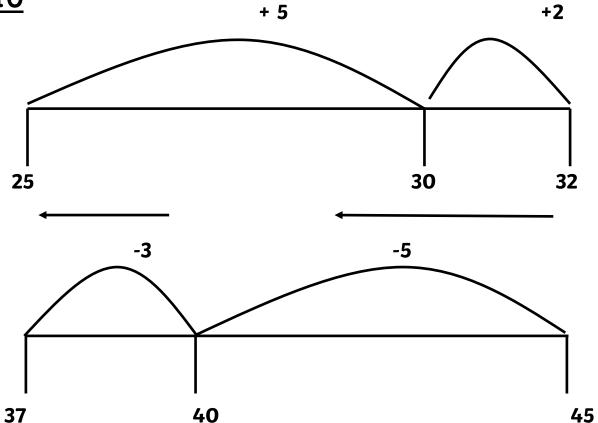

Bridge though multiples of 10

25 + 7 = becomes 25 + 5

then

30 + 2

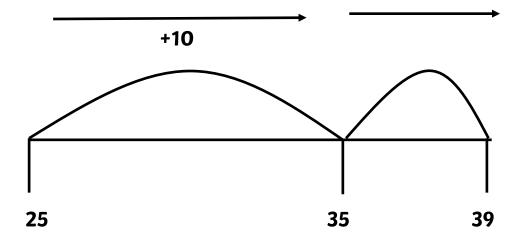

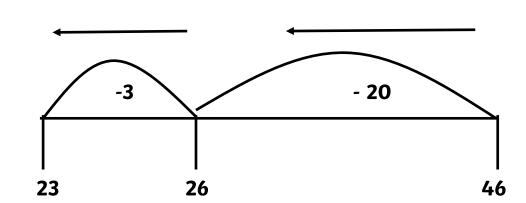

Partitioning using multiples of 10

$$5 + 4 = 9$$

$$6 - 3 = 3$$

Compensating to add/subtract numbers close to a multiple of 10

Year 2 Introduction to column addition & subtraction

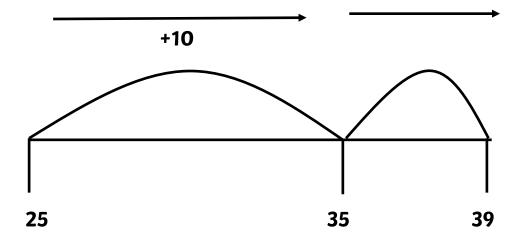

Introduction to column addition

Introduction to column subtraction

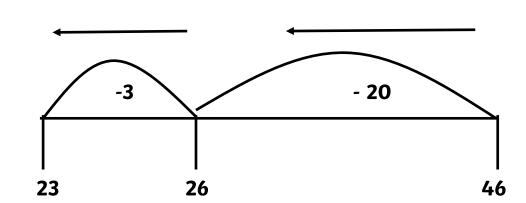

Partitioning using multiples of 10

$$5 + 4 = 9$$

$$6 - 3 = 3$$

Compensating to add/subtract numbers close to a multiple of 10

Year 2 Multiplication and Division Strategies

Multiplication

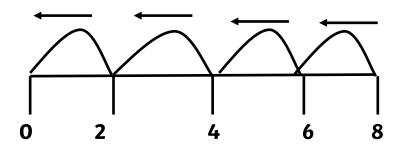

There are 4 apples in one box. How many apples in 6 boxes?

<u>Arrays</u>

Repeated Addition $2 \times 4 = 2 + 2 + 2 + 2$ or $4 \times 2 = 4 + 4$

Number lines

 $2 \times 4 = Can$ also be used for division $8 \div 2$

Year 2 Multiplication and Division Strategies

Division

5 eggs fit in a box. How many boxes would you need to pack 20 eggs? How many jumps would we have to do on the

number line 0 4 boxes 3 boxes 10 2 boxes 15 1 box 20

$$20 \div 5 = 4$$

This number line shows how to work out the calculation.

Multiplication & Division

Signs and Symbols

Double by partitioning

 $16 \times 2 = ?$

Partition 16 into 10 and 6

 $10 \times 2 = 20$

 $6 \times 2 = 12$

20 +12 = 32

Halving by partitioning

16 ÷ 2 = ? Partition 16 into 10 and 6

 $10 \div 2 = 5$ and $6 \div 2 = 3$

5 + 3 = 8

Clover Hill Primary School Year 3

Mental & Written
Calculation Policy

Addition and Subtraction

Children in Year 3 should:

- Add and subtract numbers mentally including Hundreds, Tens & Units +/- Units, Hundreds, Tens & Units+/Tens, Hundreds, Tens & Units+/- Hundreds.
- Use horizontal number sentences and empty number lines sometimes to support explanation of their mental calculation methods.
- Solve varied addition and subtraction problems including missing number problems using number facts and place value.
- Develop their understanding of written methods; working from expanded to using (compact) formal written
 methods of columnar addition and subtraction with numbers of up to three digits. Particular attention should be
 paid to the language used when modelling these methods. The value of digits should be retained according to
 place value and use of practical materials /representations may aid understanding
- Estimate the answer to a calculation and check using inverse operations.

Multiplication and Division

Children in Year 3 should:

- Draw pictures and arrays to represent multiplications and divisions if necessary to support understanding, including for situations involving remainders.
- Use number sentences and / or number lines to explain multiplication / division as repeated addition / subtraction
- Partition arrays to find related number facts for single digit tables facts eg 8 \times 4 = (4 + 4) \times 4 or 8 \times 4 = (5 + 3) \times 4.

- Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables.
- Connect 2, 4 and 8 tables through doubling.
- Develop efficient mental methods e.g. using commutativity and associativity and using known facts to derive other related facts.
- Use partitioning and use of the distributive law to introduce multiplication and division of a two digit by one digit number. Support this work with images and materials such as arrays and place value counters.
- Write and calculate mathematical statements for multiplication and division using the multiplication statements
 that they know, including for two-digit numbers times one digit numbers, using mental and progressing to formal
 written methods of short multiplication and division.
- Use tables facts to solve problems including missing number, integer scaling and correspondence problems in which n objects are connected to m objects.

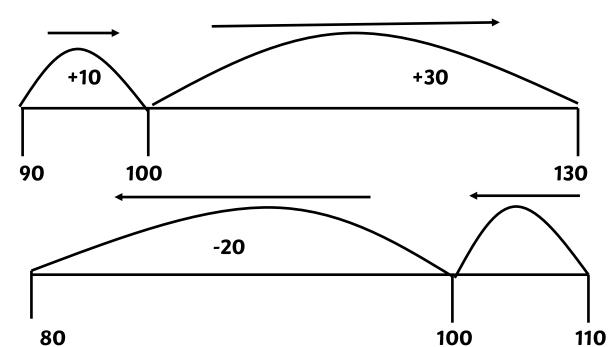

Year 3 — Addition and Subtraction Mental Strategies

Add/subtract ones. Tens and hundreds using number bonds and place value to find efficient steps

Division

Partition 56 into 40 and 16

Formal method

Clover Hill Primary School Year 4

Mental & Written
Calculation Policy

Addition and Subraction

Children in Year 4 should:

- Continue to add and subtract numbers with up to four digits mentally where the nature of the numbers makes this appropriate. They may use horizontal number sentences or empty number lines to support an explanation of the steps in their calculation. They should be given opportunities to identify calculations which are appropriate for a mental method and explain why.
- Add and subtract numbers with up to four digits using the formal written methods of columnar addition and subtraction where appropriate. Their understanding of the procedures involved may be supported by the use of expanded written methods and practical materials if required.
- Estimate and use inverse operations to check answers to a calculation.

Multiplication and Division

Children in Year 4 should:

- Recall multiplication and division facts for multiplication tables up to 12×12
- Explore division situations that give rise to remainders
- Use place value, known and derived facts to multiply and divide mentally (e.g. $600 \div 3 = 200$ can be derived from $2 \times 3 = 6$, including multiplying by 0 and 1; dividing by 1; multiplying together three numbers.
- Use knowledge of number facts and laws of arithmetic: commutative, associative and distributive to solve mental and written calculations.

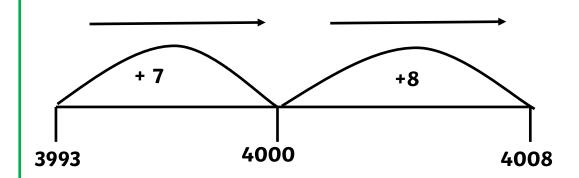

- * Recognise and use factor pairs
- Use arrays and models such as the grid method or place value counters to develop understanding of the formal methods of short multiplication and division
- Multiply two digit and three digit numbers by a one digit number using formal written layout of short multiplication
- * Use the formal written method of short division with exact answers.
- Solve one and two step problems in contexts involving multiplying and adding, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and correspondence problems such as when n objects are connected to m objects.

Calculation Policy

Addition and Subtraction

Children in Year 5 should:

- Add and subtract numbers mentally with increasingly large numbers e.g. 12,462 2300 = 10,162. Use horizontal number sentences and empty number lines sometimes to support explanation of their methods. They should be given opportunities to identify calculations which are appropriate for a mental method and explain why.
- * Add and subtract whole numbers with more than four digits, including using formal written methods (columnar addition and subtraction). Particular attention should be paid to the language used when modelling these methods. The value of digits should be retained according to their place value.
- * Understanding of the procedures involved may be supported by the use of expanded written methods and practical materials if required.
- * Use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy
- * Solve addition and subtraction multi-step problems in context, deciding which operations to use and why.
- * Learn how to record the method they used when working with a calculator.

Multiplication and Division

Children in Year 5 should:

- Apply all multiplication tables and related division facts frequently, commit them to memory and use them confidently to multiply and divide numbers mentally to make larger calculations.
- Develop understanding and use of factors, multiples, factor pairs, common factors and multiples, primes, prime factors, non primes (composite numbers), squares and cubes (including notation for these).
- Establish if a number up 100 is prime and recall primes to 19.

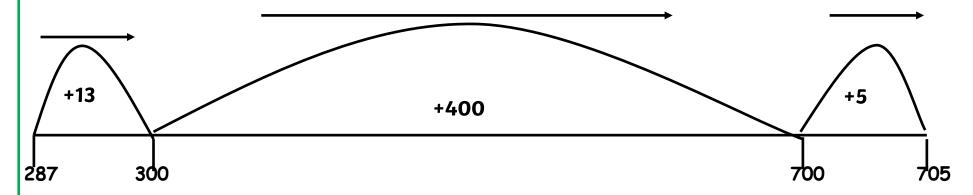

- Multiply numbers up to 4 digits by a one or two digit number using a formal written method, including long multiplication for two-digit numbers
- Divide numbers up to 4 digits by a one digit number using the formal written method of short division and interpret remainders appropriately for the context, including as fractions, decimals or by rounding.
- * Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000
- Use an expanded / informal method if they are not ready for the formal methods and be supported towards an understanding of the compact method using e.g. the grid method or place value counters
- Use multiplication and division facts to solve problems involving scaling by simple fractions and problems involving simple rates

Mental & Written
Calculation Policy

Children in Year 6 should:

- Perform mental calculations including with mixed operations and large numbers (and decimals). Use horizontal number sentences and empty number lines sometimes to support explanation of their methods. They should be given opportunities to identify the most appropriate tool for calculations ie mental method, mental with recording or formal written method and explain why.
- Practise addition and subtraction for larger numbers and decimals using the formal written methods of columnar addition and subtraction. The value of digits should be retained according to their place value. Materials / representations may support understanding.
- Use estimation to check answers to calculations and determine, in the context of the problem, an appropriate degree of accuracy.
- * Round answers to a specified degree of accuracy.
- Use knowledge of the order of operations, and use of brackets, to carry out calculations involving the four operations.
- * Solve addition and subtraction multi-step problems in contexts, deciding which operations to use and why.

Multiplication and Division

- Perform mental calculation, including with mixed operations and large numbers. Identify common factors, common multiples and prime numbers.
- Multiply numbers up to four digits by a two digit whole number using the formal written method of long multiplication.

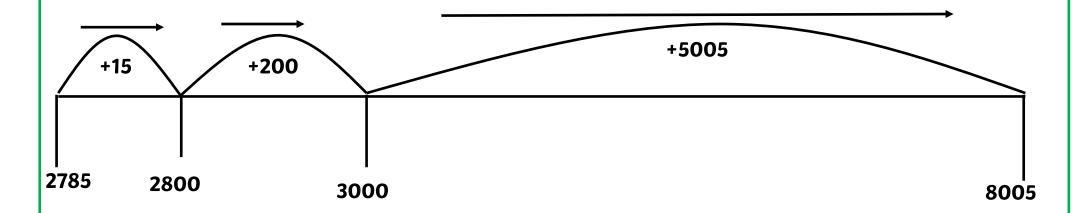

- * Divide numbers up to four digits by a two digit whole number using the formal written method of long division and interpret remainders as whole number remainders, fractions, decimals or rounding.
- Divide numbers up to four digits by a two digit whole number using the formal written method of short division where appropriate, and interpret remainders according to the context.
- Use knowledge of the order of operations to carry out calculations involving the four operations.
- Solve problems in context using all four number operations and determine, in the context of the problem, an appropriate degree of accuracy

 They should be given opportunities to identify the most appropriate tool for calculations ie mental method, mental with recording, standard method or calculator and explain why.
- Use compact formal methods if they can do so efficiently and with understanding.

	3	7	8	3	-

Use signs or symbols to complete questions using known facts.

Use number sentences to show mental strategy used.

$$38 \times 25 =$$

$$38 \times 100 = 3800$$

$$3800 \div 4 = 950$$

Year 6 Formal Written Methods

Short Multiplication

Short Division

 2741×6

432÷5

2 7 4 1 6 x 6 1 1 6 4 6

5 4 43 32

Long multiplication for two digit numbers

 124×26

	1	2	4
X		2	6
	1	2	
	7	4	4
	•	7	7
2	4	8	0

Year 6 Formal Written Methods

Long Division

Or

432 ÷ 15 becomes 28 remainder 12/15 = 28 & 4/5 or 432 ÷ 15 become 28.8

	0	2	8	
15	4	43	2	-
-	3	0	0	15 x 20

Always write down your times tables down the side to help you calculate.

$$1 \times 15 = 15$$

$$2x15 = 30$$

$$3 \times 15 = 45$$

$$4x15 = 60$$

$$5 \times 15 = 75$$

$$6x15 = 90$$

$$7 \times 15 = 105$$
